

# How Much Do They Weigh?

1 tonne is a thousand kilograms. Today, we are going to research the estimated weight (or biomass) of some of the most populous creatures on Earth. You may discover that the smallest creatures on Earth hold the most importance.

Animal Name	Image	Biomass (tonnes)
Copepods		1-2 billion
Antarctic krill		
Termites		50 million
Domesticated cattle		
Humans		
Domesticated poultry		5 million
Fish		
Squid		
Jellyfish		
Whales		1 million
Wild birds		
Wild mammals		10 million
Domesticated pigs		
Domesticated sheep		2 million
Crabs & lobsters
