Simone de Beauvoir
1908 - 1986

Simone de Beauvoir was a famous French writer and philosopher who worked hard to make life fairer for everyone, especially women. She is most well-known for her book The Second Sex, where she explained that girls and boys aren't born with set roles but are shaped by how society treats them. One of her most famous ideas is, "One is not born, but rather becomes, a woman," showing how people grow into their roles.

Simone believed that girls and boys should have the same chances in life, whether it's in school, sports, or jobs. She wanted everyone to think about how to make the world a fairer place and encourage people to fight for equal rights.

Her ideas helped start the modern feminist movement, which focuses on making sure boys and girls are treated equally. Simone de Beauvoir's work inspires us to always think about what's fair and how we can all help make the world a better, more equal place.
