

Ocean Zones

Research **two** creatures from the Great Southern Ocean that live in each of the layers mentioned below. Once you have completed your research, create a visual representation of each animal and label them within their respective layer (an example for the Midnight layer has been provided).

SEA LEVEL

SUNLIGHT

The most sunlight and highest water temperatures.

200 m

TWILIGHT

Fading sunlight and vast temperature changes.

1000 m

MIDNIGHT

No sunlight. Stable near-freezing temperatures and extreme pressure.

4000 m

THE ABYSS

Near-freezing temperatures. Few marine creatures live here.

6000 m

THE TRENCHES

Near-freezing temperatures. Tiny, single-celled organisms survive here.
