

# Apex Predators of the World

Although apex predators have no natural hunters, climate change is causing them to face serious problems. Can you find other apex predators in danger too?

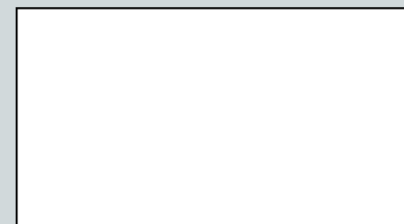

North America

Europe

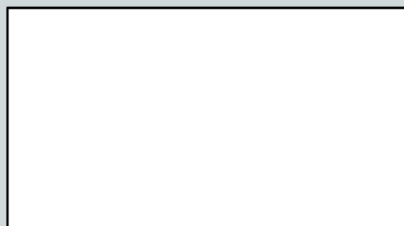

Asia

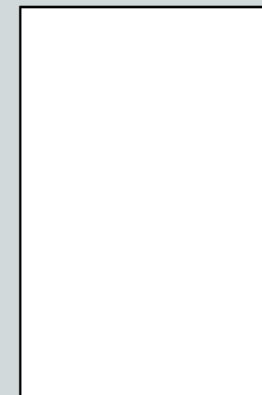

Oceania

South America

Africa

Antarctica

## Leopard Seal

Melting sea ice: Climate change reduces leopard seals' habitats as ice melts.

Declining prey: Climate change disrupts the availability of penguins and fish, harming leopard seals' food sources.

Altered ocean conditions: Climate change affects leopard seals through rising temperatures and ocean acidification, endangering their survival.
