During this course, we're diving into SDG 15: Life on Land. Your challenge is to explore how we can contribute to preserving and sustaining our terrestrial ecosystems right from our classroom. Each week, choose 1 challenge from the list that sparks your interest, and let's see what innovative solutions we can create to support our planet's diverse land and life forms.

Endangered Species
Campaign: Research
local endangered species
and create campaigns to
educate our community
about these species and
how to protect them.

#### **Insect Hotel Creation:**

Build 'insect hotels' to provide homes for beneficial insects. Learn about their important roles in our ecosystems.

## Seed Bomb Workshop:

Learn how to make seed bombs with native plant seeds and distribute them to help our plants grow in the right places.

Nature Clean-Up Days: Join in on clean-up days at nearby parks or forests. Learn about the impact of litter on our land ecosystems and help make a difference. Wildlife Observation:
Observe local wildlife and document your findings.
Create a report highlighting why each species is important to our ecosystem.

### Seed-to-Tree Journey:

Grow a seed into a sapling and then replant it outdoors. Watch and learn how a tiny seed becomes a part of our ecosystem!

Composting Workshop: Discover

how to compost
and understand its
benefits for the
health of our soil
and plants. Once
you understand,
start a composting
club at school and
encourage
everyone to recycle
their waste food.

## **Ecosystem Model**

Projects: Build a model of our local ecosystem.
Show how different organisms live together and depend on each other.

Recycled Art Competition: Use

recycled materials to create beautiful artworks. Show how recycling can help our environment and have fun being creative! **Community Garden** 

Project: Let's start a garden at our school!
You'll learn to grow native plants and understand their role in our local biodiversity.

# 15 LIFE ON LAND

Nature Photography Exhibition: Take photographs of our local

flora and fauna. We'll hold an exhibition to show everyone the beauty and diversity of our local environment.

Local Tree Diary: Choose a local tree and keep a weekly diary of its changes, wildlife visitors, and its importance in our ecosystem. Share your tree's story in a creative way at the end of the term.

"Alone We Can Change Today, But Together We Can Change Forever."
