

The Polar Bear

FACT FILE

Polar bears are marine animals, meaning they live in water. They can be found in the Arctic circle and are in danger of becoming extinct.

The Largest bear on Earth!
Weighing up to 800KG

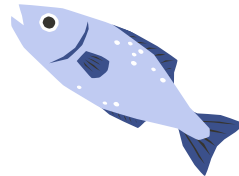

Habitat

Polar bears live on sea ice in the Arctic circle. They hunt and give birth on the ice and are an important part of the food chain. They are apex predators meaning no other animals hunt them. They can live for up to 30 years.

Life on the ice

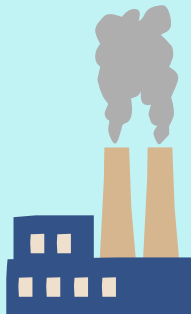

The polar bear is covered with blubber to keep it warm on the ice.

What do they eat?

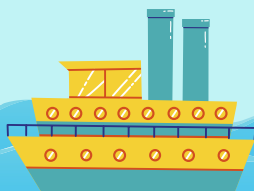

Threats

- Melting ice due to climate Change
- Pollution
- Overfishing
- Tourism
- Hunting
- Shipping
- Plastic

What Can we do?

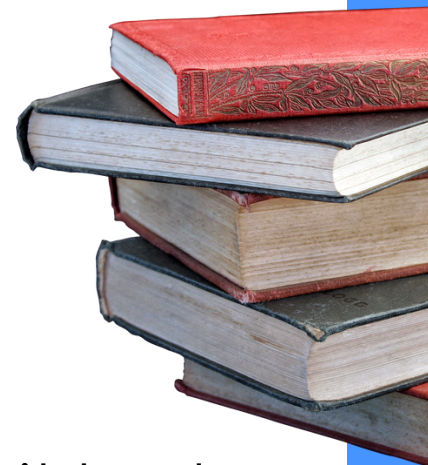

By **recycling**, **reusing** and **reducing** the things that we use each day, we can stop climate change and help keep the earth cool. This will allow the polar bear to live peacefully in its habitat and protect this animal from extinction.

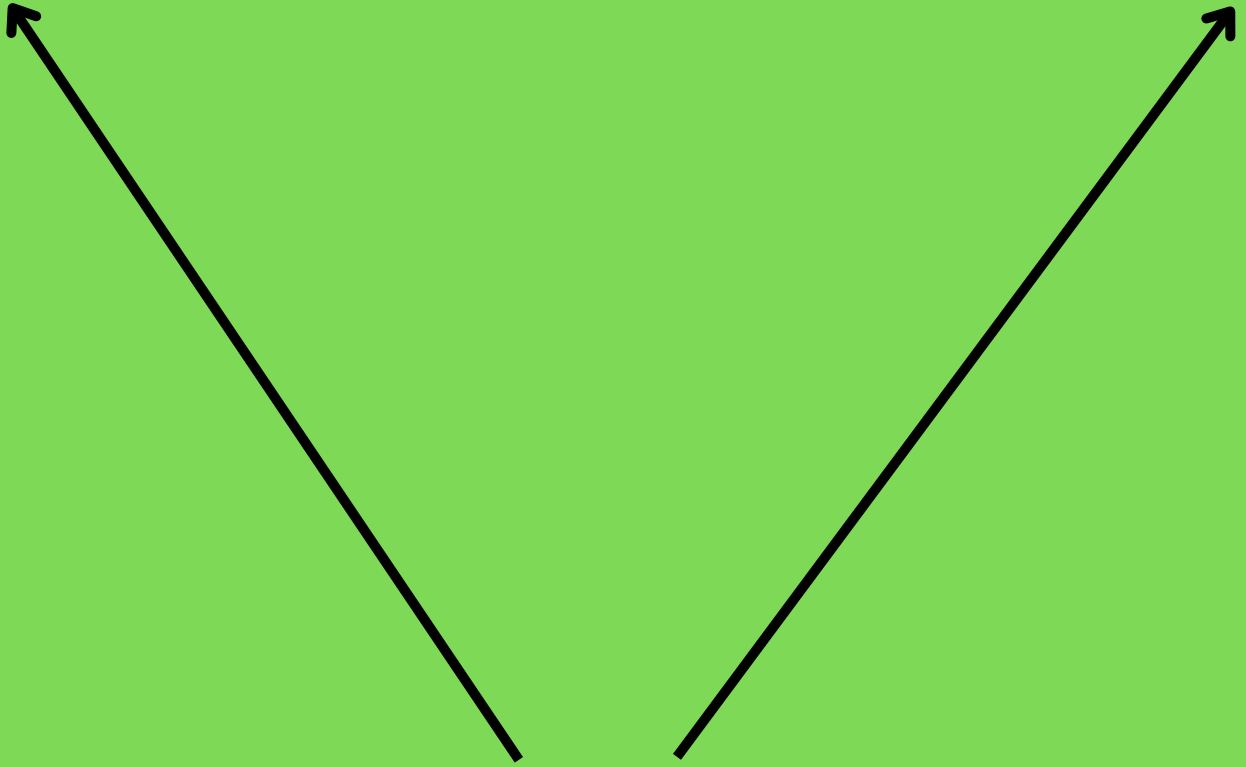

Research Questions

- Where does the name of your animal come from?
- Which parts of the world can your animal be found?
- What amazing facts do you know about this creature?
- What kind of diet does it have?
- What habitat does it live in and is the habitat in danger of being destroyed?
- How many babies does the animal have each year?
- What dangers is the animal currently facing?
- What can we do to help protect this creature?
- How does it compare to other creatures around it?
- Is it a herbivore, carnivore or omnivore?
- Does the animal feature in a children's book?
